

Why Wait?

*Business Insurance Does Not Cover Data Loss.
When your server crashes, how are you going to recover?*

When was the last time you created a backup of your company's data? Most companies are under the impression they have reliable backup procedures in place. Unfortunately, when it comes time to restore their data they are relying on antiquated tapes, faulty tape drives, or have stored their backups on the same machine as their data.

Real-time replication assures business continuity in a crisis by instantly restoring your applications and data. BOTICS can provide you with several methods to backup your company's data, whether on one sever, every workstation, one office or multiple locations.

BACKING UP TO LOCAL DISK OR TAPE CAN PROTECT AGAINST THE ACCIDENTAL DESTRUCTION OF A FILE BUT WILL DO NOTHING TO PROTECT YOU WHEN YOUR FACILITY SUFFERS DAMAGE FROM A HURRICANE, FIRE, THEFT, OR FLOODING.

BOTICS COMPUTER CONSULTING SERVICES, INC.
